

Total mileage of vehicles using GMS's FinTech service worldwide exceeds "250 million km (about 6,250 laps of the earth)"
<https://www.global-mobility-service.com/en/>

Helping to provide financial access towards the 1.7 billion poor and low-income population who cannot afford cars, Global Mobility Service Inc. (Headquarters: Minato-ku, Tokyo; President/Founder : Tokushi Nakashima; hereinafter referred to as "GMS"), a financial inclusion type FinTech startup that provides credit creation services by utilizing IoT technology is proud to announce that the total mileage of vehicles using GMS's FinTech service has exceeded "250 million km (about 6,250 laps of the earth)".

Many people who had previously been unable to buy a car as they could not get access to financial services due to poverty or low income were able to own a car for the first time with GMS's FinTech service. In this pandemic, the figure of "250 million km" is a proof that the drivers have flexibly adapted to the environment and have worked hard even though their actions were limited by the measures against COVID-19. As the convergence of the COVID-19 infection is still uncertain and the economic disparity is widening, the demand for our service is increasing. For the drivers who always give their best to work hard, GMS will continue to further accelerate its business growth.

GMS will continue to promote truly sustainable business in Japan and in countries part of ASEAN by creating economic rationality while solving social issues such as poverty, considered to be one of the most important issues of the United Nations' Sustainable Development Goals (SDGs). To find out more about GMS' initiatives, please see this video (<https://youtu.be/OD7SvnoRYAo>).

■About Global Mobility Service Inc.

With our vision "We create a system in which all hard workers are recognized", GMS is a fintech startup working for financial inclusion by creating credit for the 1.7 billion poor and low-income people in the world. By analyzing vehicle data (driving status, speed, etc.) collected by the MCCS, an IoT device equipped with technology to remotely control vehicles, and financial data (payment status, etc.) obtained in conjunction with financial institutions, we visualize the creditworthiness of drivers and create opportunities to utilize financial services such as loans and leases for those who are unable to qualify for conventional credit screening. As of October 2020, we have raised a cumulative total of 5.6 billion yen in recognition of our business model of addressing social issues by creating job opportunities for poor and low-income people in Japan and in ASEAN countries (Philippines, Cambodia, and Indonesia). We will continue to contribute to the international community towards the realization of a prosperous society through a business model that creates economic rationality in solving problems such as poverty.
